

BDX DROID

Support Rig

~1 HR

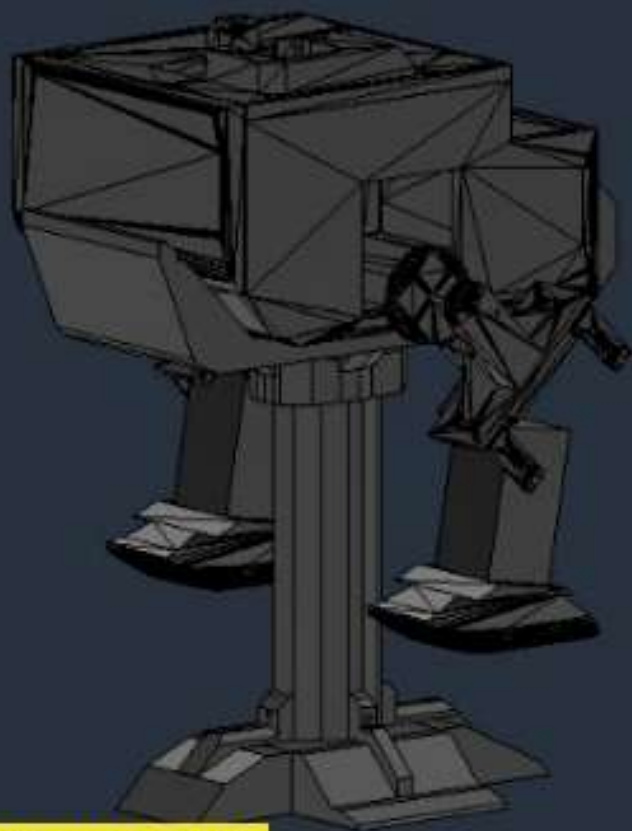

fig.1 - full rig + droid

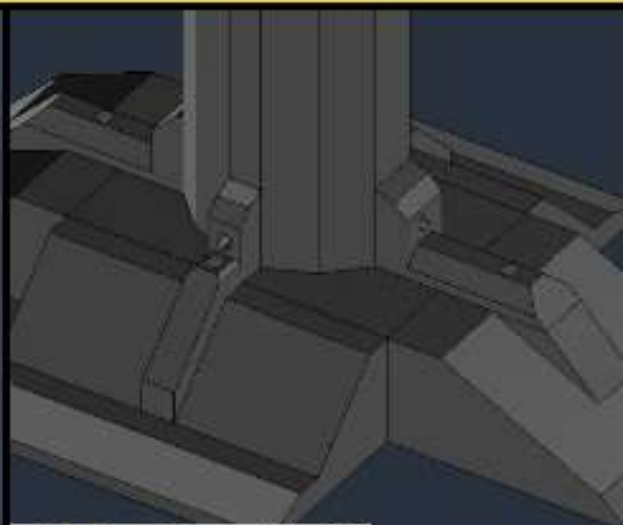

fig.2 - base detail

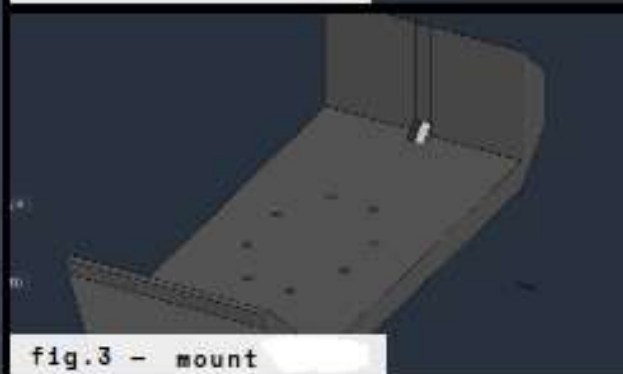

fig.3 - mount

WHAT IS THIS?

A support structure for the BDX Droid — suspends the robot mid-air while I tune gait code. Without it, the droid faceplants and kills servos worth months of saving.

Why build it?

BDX has no passive balance. Active servo control only. Testing means holding it in the air. Simple fix, works well.

CAD designed

3D print

test rig

servo-safe

SPECS

Project	Support Rig
Droid DoF	12
Legs	2
Designed in	FUSION 360
Output	3D print
Build time	~1 HR lol
Status	DONE
